

Electrical Testing & Inspection

Our skilled team provides a comprehensive testing and inspection service, ensuring that anything from a mobile home to a factory complex is running as safely and efficiently as possible. We are members of NICEIC, the UK's consumer safety organisation and independent regulatory body for the electrical industry.

We are also registered with the Part P self-certification scheme of the Building Regulations, whose provisions are intended to increase the safety of households by improving the design, installation, inspection and testing of electrical installations in dwellings. The scheme was the outcome of the Construction Industry Deregulation Task Force's recommended that electrical safety requirements be included in the

Building Regulations to address the issue of deaths and serious injury caused by accidents involving unsafe electrical installations in the home.

We provide proactive and reactive services including:

- Periodic inspection BS7671
- Small works: test and inspection BS7671
- Housing: full test and inspection BS7671
- Emergency lighting BS5266-7:1999
- Fire detection & alarm systems BS5839-1:2002
- Portable appliance testing COD-2001
- Internal wiring systems
- Distribution points
- Switched sockets
