

Structured Cabling

Structured cabling in essence allows the majority of today's Data and Voice networks to be distributed over a single infrastructure. With the arrival of IP Communications it has never been more critical to have a platform upon which all applications can be built with confidence.

At the centre of every IT system is the data cabling infrastructure, the nuts and bolts that hold the whole system together. Without a good quality infrastructure, data will be transmitted slower, information can be corrupted or lost and in the very worst case applications will simply fail.

DCS has been designing and installing cabling infrastructures since 2000 and has gained the experience and expertise to enable us to offer a broad range of data cabling solutions. The data cabling infrastructure portfolio includes:

- Category 5e UTP/FTP/STP Cabling
- Category 6 UTP/STP Cabling
- Category 7 STP
- Coax Cabling

- Fibre Optic – Multimode and Singlemode
- Traditional Multi-core Voice Distribution

All products listed are available with a Low Smoke Zero Halogen (LS0H) sheath to remove the deadly fumes associated with Fire condition.

Combined Electrical Contracting and IT Cabling

By combining our extensive in house skills of Electrical Contracting and Structured Cabling, projects are completed with the highest level of project co-ordination. This combination also creates the added bonus of:

- Full co-ordination ensures that any project changes are effected throughout the installation.
- Single point of contact to manage the project equates to reduced costs and improved efficiency.
- This also results in an improved solution and enhanced documentation.
